The novel opens with Aunt Polly scouring the house in search of her nephew, Tom Sawyer. She finds him in the closet, discovers that his bands are covered with jam, and prepares to give him a whipping. Tom cries out theatrically, "Look behind you!" and when Aunt Polly turns, Tom escapes over the fence. After Tom is gone, Aunt Polly reflects sadly on Tom's mischievousness and how she lets him get away with too much.

Tom comes home at supper. Tom has had a row about his adventures. During supper, Aunt Polly tells Tom that he must not be skipped school that afternoon and must remain at home until his collar is still warm from the need. Tom's half-brother, Sid, Tom's half-brother, is also at the house, and Tom arranges the shut himself to disguise his collar.

Tom goes out of the house to look for his cousins, Joe and Huckleberry. While wandering the streets of St. Petersburg, Tom encounters a group of boys, including Joe and Huckleberry. Tom and the group pass by the house, Tom eventually chases the boys to the way home.

When Tom returns home in the evening, Tom finds Aunt Polly waiting for him. She notices he dirtied clothes and resolves to make him work the next day, a Saturday, as punishment.

On Saturday morning, Aunt Polly sends Tom out to whitewash the fence. Tom passes by, and Tom tries to get him to do some of the whitewashing in return for a "white alley," a kind of license. Tom almost agrees, but Aunt Polly appears and chases him off, leaving Tom alone with his talents.
The novel opens with Aunt Polly scouring the house in search of her nephew, Tom Sawyer. Endoscopic submucosal dissection using the ... 

Endoscopic submucosal dissection (ESD) was developed in Japan for the nonoperative treatment of early gastric cancer. 1 ESD addressed the primary limitation of piecemeal endoscopic mucosal resection (EMR) and allowed for en bloc resection with accurate histopathologic assessment. 2 ESD was subsequently expanded into the colorectum and has also been discovered to be an effective treatment modality for early esophageal cancer. 3 This review shall discuss the indications for ESD in the esophagus ...
Endoscopic submucosal dissection (ESD) is a procedure that is used as an alternative to a surgical resection for removal of tumors of the GI tract. It is a novel procedure that was developed in Japan in the early 2000s. The ESD technique can remove large areas of precancerous or cancerous cells from the lining of the esophagus, stomach or colon. ESD is widely used in Japan as a minimally invasive treatment for early gastric cancer. The application of ESD has expanded to the esophagus and colorectum. The indication criteria for endoscopic resection (ER) are established for each organ in Japan. In this issue of Gastrointestinal Endoscopy Clinics of North America, we invited pioneers and experts in this field to share recent advancements and expansions of ESD and its technical aspects in different organ systems. In addition, this issue covers the associated techniques of per oral endoscopic myotomy (POEM) and natural orifice transluminal endoscopic surgery (NOTES) to further advance.
